

Vadodara company roped in for construction of world's tallest temple

Tanya Anand Mathur

Vadodara: A Vadodara-based firm has been roped in for supplying equipment for construction of 'Vishkanya Chandrodaya Mandir' - world's tallest temple which is under construction at Vadodara in Maharashtra.

Covering an area of 1600 acres, it will be one of the most expensively built temples in the world by ISPCON Hongkong.

KYB Corpnl, a subsidiary of multi-billion dollar KYB Corporation of Japan, having its manufacturing and R&D facility in Vadodara, is providing complete lifting plant and transit vehicle for the project.

The temple will have a height of 235 metres (or 780 feet, with total of 24 storeys, with a special elevator that will take

visitors from the ground level to the 300 feet tall viewing gallery giving an intensive 3D surround light experience of different planetary systems described in the Vedic literature.

A look-alike of both towers

of Vishkanya will be decorated around the magnificent temple from descriptions in Vedas, Bhagavata, Skand, and other scriptures. Spread across 30 acres, it will consist of 12 floors of 200.

"It is a very prestigious pro-

ject not only in India, but an international landmark. Being the tallest temple in the world, it requires special building techniques and a very strong structure which can withstand very high wind pressure. This certainly requires high performance equipment which can be provided only by latest lifting plants. We at KYB Corpnl are proud to manufacture such special lifting plants in India," said Preet Raj Keshava, managing director of KYB Corpnl.

"We are proud to associate with this project and Vishkanya Chandrodaya Mandir project team is fully satisfied with our equipment, including lifting plant and transit vehicle. We have also committed to supply our state-of-the-art elevator and concrete pumps for this project," he said.
